

I respectfully urge the urge you to reject the NAB's petition 04-160. Satellite Radio is radio just as AM and FM are radio. The only times I tune in to my local am/fm stations are for traffic and weather. There is no other reason, programming is terrible and the number of stations is very limited. With satellite radio, I have many choices of content and stations. Additionally, I would also like to voice my concern of Broadband Over Powerlines (BPL). PLEASE do not let this happen! It will wipe out the only true hobby I have, shortwave radio. There are MANY means of broadband and none of them have reached maturity, why introduce another means with such detrimental effects???
